MReport User Interface

File Tree

The functionality of MCFiler has been incorporated into MReport, including:

- Browse and organise data files by their survey parameters.
- Rapidly assess data file quality en-mass using the Hits and Spectrum graphs.
- Directly load data files into the File Management List.
- Edit data file survey parameters to correct user error.
- Compile summary reports of data files.

This File Tree is now the primary means of loading data files into the File Management List. Simply select one or more files, and click the **New report** button.

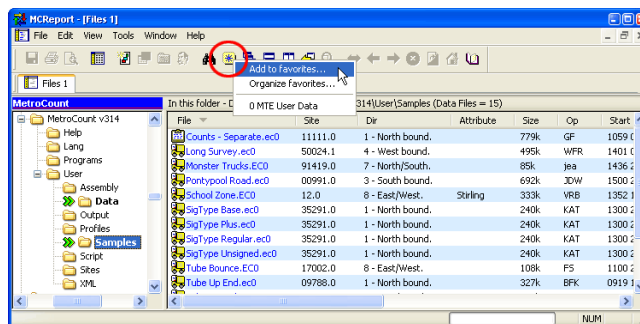

Loading datasets into the File Management List

Favourite Places

MReport's Favourite Places is a list of favourite folders or help topics you compile.

For example, with a File Tree window active, simply click the **Favourites** button to select from a list of favourite folders. To add the current folder to your favourites, select **Add to favourites**.

Adding folders to your Favourite Places

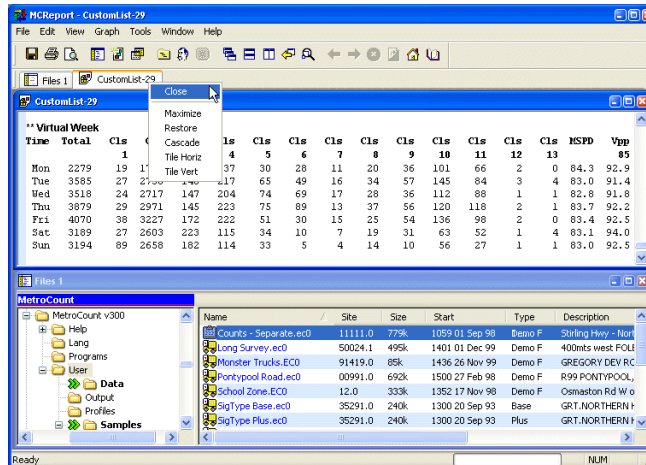

Friendly names can be given to favourites by selecting **Organise favourites**. The order of favourites can be adjusted by dragging.

Organising Favourite Places

Tab Bar

MCReport's Tab Bar provides rapid switching between all your open windows, including File Trees, reports and Active Help windows. The common window arrangement functions are provided by right-clicking on a tab. Note that File Tree windows are grouped at the start of the Tab Bar.

Switching between reports using the Tab Bar
