# Event List Report

---

The Event List report is a new, row-based, customisable report for Event Count data. The report's options include:

- Custom time step, from five minutes to one day.
- Row with day and date at the start of each day.
- Standard MetroCount header.
- Field delimiters to assist exporting of data.

## Event List report options

By default, each row includes the date, time and a column for the defined Input Contribution (**A**, **B**, **A+B**, **A-B**). You can optionally include a column for the B input to give both lanes in a single report. For data files collected using the separate sensor layout, the Input Contribution should be **A**, and for a split sensor layout, the Input Contribution should be **A-B**.
