Profile Percentage

A report's header now includes a line displaying the number of vehicles or events included in the calculations of a report, versus the total number of vehicles or events available in the tagged datasets.

This is to alert you to occasions where an unexpected percentage of vehicles is being ignored due to Profile filtering, such as speed, direction or separation.

Note that **In Profile** will rarely be exactly 100%. Slight trimming will usually occur from common time filtering, such as aligning to hours.

Percentage of vehicles filtered through the Profile
